Northwind Labs Information Security Policy (fictional sample document)
Page 1 - Accounts and passwords

All company accounts must use a password of at least 14 characters.
Passwords must be changed immediately if a compromise is suspected,
but routine periodic password changes are not required.
Multi-factor authentication is mandatory for email, source code hosting
and the cloud console. Hardware security keys are issued to administrators.

Page 2 - Devices and data

Company laptops must use full-disk encryption and lock after 5 minutes of inactivity. Customer data may only be stored in approved systems; copying customer data to personal devices or USB drives is prohibited. Lost or stolen devices must be reported to it-security@northwind.example within 1 hour of discovering the loss.

Page 3 - Incident response

Security incidents are classified as P1 (critical), P2 (high) or P3 (low).
P1 incidents require the on-call security engineer to respond within 15 minutes and a written incident report within 48 hours.
Phishing emails should be reported with the Report Phishing button and must not be forwarded to colleagues.
